Art Unit: 1648

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-6, drawn to a vaccine composition, classified in Class 435, subclass 325.

II. Claims 7-11, drawn to an HIV suppression factor, classified in Class 530, subclass 350.

III. Claims 12-18, drawn to a method for vaccinating, classified in Class 424, subclass 184.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, one can vaccinate with other compositions.

Inventions I and II are different compositions with different structures and characteristics.

Art Unit: 1648

Inventions II and III are a composition and method, respectively. The method does not use the composition and thus, the inventions are unrelated.

Because these inventions are distinct for the reasons given above and have acquired separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17-(h).
